

Analogue radio-controlled wall clock

Page 1 / 1
April 2024

- 857-style wall clock with illuminated display
- Radio-controlled movement with sweeping second
- European radio standard DCF77
- Manual setting option in case of failure to detect a radio signal out of range
- Satinized case
- Mineral glass with anti-reflective coating on both sides
- Ø 297 mm
- Including 1.5 V AA battery

The analogue radio-controlled wall clock in our 857 series is extremely accurate and perfectly readable, even in the dark, as the primary markings, consisting of the hour markers, numerals, hour and minute hands, as well as the triangle at 12 o'clock, have a luminous coating. It has a diameter of 29.7 cm.

The radio-controlled movement itself functions with a sweeping second hand and complies with the European radio standard DCF77. This clock also comes with a manual setting option for when it is out of range of the radio signal. It is fitted with a satinised case and anti-reflective mineral glass. A 1.5 V AA battery is included.
